

CLAIMS

What is claimed is:

Sub
D1

5

1. A method for use by a network security system, comprising:
identifying vulnerability conditions of a network;
based on those vulnerabilities, monitoring the network for intrusions so
that a user is only notified of intrusions to which the network is susceptible.

10

2. A method for use by a network Security system, comprising:
identifying vulnerability conditions of a network;
based on those vulnerabilities, monitoring the network for intrusions
based on Strong and Semi-strong Validity.

15

3. A network security system, including:
a vulnerability detection system that uses a first set of rules to identify
vulnerability conditions on a network;
an intrusion detection system that uses a second set of rules to identify
intrusion conditions on the network, wherein the second set of rules is based
on the vulnerability conditions identified by the intrusion detection system.

20

4. A network security system, including:
a vulnerability detection system that identifies vulnerability conditions
on a network;
a target-based intrusion detection system that monitors the network for
intrusions that attack an identified vulnerability or that attack a vulnerability
where presence is not identified but is likely given the presence of the
identified vulnerability.
